Product datasheet for SC201069

CARS2 (NM_024537) Human 3' UTR Clone

Product data:

Product Type:	3' UTR Clones
Product Name:	CARS2 (NM_024537) Human 3' UTR Clone
Vector:	pMirTarget (PS100062)
Symbol:	CARS2
Synonyms:	COXPD27; cysRS
ACCN:	NM_024537
Insert Size:	150 bp
Insert Sequence:	>SC201069 3'UTR clone of NM_024537 The sequence shown below is from the reference sequence of NM_024537. The complete sequence of this clone may contain minor differences, such as SNPs. Restriction Sites:	SgfI-MluI
OTI Disclaimer:	Our molecular clone sequence data has been matched to the sequence identifier above as a point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences , e.g., single nucleotide polymorphisms (SNPs).
Components:	The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials.

Summary: This gene encodes a putative member of the class I family of aminoacyl-tRNA synthetases. These enzymes play a critical role in protein biosynthesis by charging tRNAs with their cognate amino acids. This protein is encoded by the nuclear genome but is likely to be imported to the mitochondrion where it is thought to catalyze the ligation of cysteine to tRNA molecules. A splice-site mutation in this gene has been associated with a novel progressive myoclonic epilepsy disease with similar symptoms to MERRF syndrome. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jun 2017]
