

Product datasheet for **SC201155**

Proteasome subunit beta type 2 (PSMB2) (NM_002794) Human 3' UTR Clone

Product data:

Product Type:	3' UTR Clones
Product Name:	Proteasome subunit beta type 2 (PSMB2) (NM_002794) Human 3' UTR Clone
Vector:	pMirTarget (PS100062)
Symbol:	PSMB2
Synonyms:	HC7-I
ACCN:	NM_002794
Insert Size:	2000 bp

[View online »](#)

Insert Sequence: >SC201155 3'UTR clone of NM_002794
 The sequence shown below is from the reference sequence of NM_002794. The complete sequence of this clone may contain minor differences, such as SNPs.

Restriction Sites: SgfI-MluI

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences, e.g., single nucleotide polymorphisms (SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials.

RefSeq: [NM_002794.5](#)

Summary:

The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. The core structure is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. This gene encodes a member of the proteasome B-type family, also known as the T1B family, that is a 20S core beta subunit. Multiple alternatively spliced transcript variants encoding distinct isoforms have been found for this gene. [provided by RefSeq, Dec 2010]
