## DISC1 (NM\_001012959) Human 3' UTR Clone - SC201235

Summary: This gene encodes a protein with multiple coiled coil motifs which is located in the nucleus,

cytoplasm and mitochondria. The protein is involved in neurite outgrowth and cortical development through its interaction with other proteins. This gene is disrupted in a t(1;11) (q42.1;q14.3) translocation which segregates with schizophrenia and related psychiatric disorders in a large Scottish family. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]
