Myosin (MYH2) (NM_001100112) Human 3' UTR Clone

Product data:

Product Type: 3' UTR Clones

Product Name: Myosin (MYH2) (NM_001100112) Human 3' UTR Clone

Symbol: Myosin

Synonyms: IBM3; MYH2A; MYHas8; MyHC-2A; MyHC-IIa; MYHSA2; MYPOP

Mammalian Cell

Selection:

Neomycin

Vector: pMirTarget (PS100062)

ACCN: NM_001100112

Insert Size: 162 bp

Insert Sequence: >SC202380 3'UTR clone of NM_001100112

The sequence shown below is from the reference sequence of NM_001100112. The complete

sequence of this clone may contain minor differences, such as SNPs.

Restriction Sites: Sgfl-Mlul

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a

point of reference. Note that the complete sequence of this clone is largely the same as the

reference sequence but may contain minor differences, e.g., single nucleotide

polymorphisms (SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The

package also includes 100 pmols of both the corresponding 5' and 3' vector primers in

separate vials.

RefSeq: <u>NM 001100112.2</u>

Myosin (MYH2) (NM_001100112) Human 3' UTR Clone - SC202380

Summary: Myosins are actin-based motor proteins that function in the generation of mechanical force

in eukaryotic cells. Muscle myosins are heterohexamers composed of 2 myosin heavy chains and 2 pairs of nonidentical myosin light chains. This gene encodes a member of the class II or conventional myosin heavy chains, and functions in skeletal muscle contraction. This gene is found in a cluster of myosin heavy chain genes on chromosome 17. A mutation in this gene results in inclusion body myopathy-3. Multiple alternatively spliced variants, encoding the

same protein, have been identified. [provided by RefSeq, Sep 2009]

Locus ID: 4620

MW: 5.9
