## VRK2 (NM\_001130480) Human 3' UTR Clone - SC202697

Summary: This gene encodes a member of the vaccinia-related kinase (VRK) family of serine/threonine

protein kinases. The encoded protein acts as an effector of signaling pathways that regulate

apoptosis and tumor cell growth. Variants in this gene have been associated with

schizophrenia. Alternative splicing results in multiple transcript variants that differ in their

subcellular localization and biological activity. [provided by RefSeq, Jan 2014]
