## FIBP (NM\_198897) Human 3' UTR Clone - SC202807

Summary: Acidic fibroblast growth factor is mitogenic for a variety of different cell types and acts by

stimulating mitogenesis or inducing morphological changes and differentiation. The FIBP protein is an intracellular protein that binds selectively to acidic fibroblast growth factor (aFGF). It is postulated that FIBP may be involved in the mitogenic action of aFGF. Two transcript variants encoding different isoforms have been found for this gene. [provided by
