DGKA (NM_201445) Human 3' UTR Clone - SC203657

Summary: The protein encoded by this gene belongs to the eukaryotic diacylglycerol kinase family. It

acts as a modulator that competes with protein kinase C for the second messenger diacylglycerol in intracellular signaling pathways. It also plays an important role in the resynthesis of phosphatidylinositols and phosphorylating diacylglycerol to phosphatidic acid. Several transcript variants encoding different isoforms have been identified for this gene.
