## VPS28 (NM\_183057) Human 3' UTR Clone - SC204959

Summary: This gene encodes a protein subunit of the ESCRT-I complex (endosomal complexes required

for transport), which functions in the transport and sorting of proteins into subcellular vesicles. This complex can also be hijacked to facilitate the budding of enveloped viruses from the cell membrane. Alternative splicing results in multiple transcript variants encoding

different isoforms. [provided by RefSeq, Jul 2013]
