## Ephrin A4 (EFNA4) (NM\_182690) Human 3' UTR Clone

**Product data:** 

**Product Type:** 3' UTR Clones

Product Name: Ephrin A4 (EFNA4) (NM 182690) Human 3' UTR Clone

Symbol: Ephrin A4

**Synonyms:** EFL4; EPLG4; LERK4

Mammalian Cell

Selection:

Neomycin

**Vector:** pMirTarget (PS100062)

**ACCN:** NM\_182690

**Insert Size:** 472 bp

Insert Sequence: >SC205954 3'UTR clone of NM\_182690

The sequence shown below is from the reference sequence of NM\_182690. The complete

sequence of this clone may contain minor differences, such as SNPs.

**Restriction Sites:** Sgfl-Mlul

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a

point of reference. Note that the complete sequence of this clone is largely the same as the

reference sequence but may contain minor differences, e.g., single nucleotide

polymorphisms (SNPs).

**Components:** The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The

package also includes 100 pmols of both the corresponding 5' and 3' vector primers in

separate vials.

## Ephrin A4 (EFNA4) (NM\_182690) Human 3' UTR Clone - SC205954

**RefSeq:** NM 182690.3

Summary: This gene encodes a member of the ephrin (EPH) family. The ephrins and EPH-related

receptors comprise the largest subfamily of receptor protein-tyrosine kinases and have been implicated in mediating developmental events, especially in the perveus system and in

implicated in mediating developmental events, especially in the nervous system and in erythropoiesis. Based on their structures and sequence relationships, ephrins are divided into

the ephrin-A (EFNA) class, which are anchored to the membrane by a

glycosylphosphatidylinositol linkage, and the ephrin-B (EFNB) class, which are

transmembrane proteins. This gene encodes an EFNA class ephrin. Three transcript variants

that encode distinct proteins have been identified. [provided by RefSeq, Jul 2008]

**Locus ID:** 1945
