GM CSF Receptor alpha (CSF2RA) (NM_001161529) Human 3' UTR Clone - SC206181

RefSeq: <u>NM 001161529.2</u>

Summary: The protein encoded by this gene is the alpha subunit of the heterodimeric receptor for

colony stimulating factor 2, a cytokine which controls the production, differentiation, and function of granulocytes and macrophages. The encoded protein is a member of the cytokine family of receptors. This gene is found in the pseudoautosomal region (PAR) of the X and Y chromosomes. Multiple transcript variants encoding different isoforms have been found for this gene, with some of the isoforms being membrane-bound and others being soluble.
