

Product datasheet for SC208410

PKM2 (PKM) (NM 002654) Human 3' UTR Clone

Product data:

Product Type: 3' UTR Clones

Product Name: PKM2 (PKM) (NM_002654) Human 3' UTR Clone

Vector: pMirTarget (PS100062)

Symbol: PKM

Synonyms: CTHBP; HEL-S-30; OIP3; p58; PK3; PKM2; TCB; THBP1

ACCN: NM_002654

Insert Size: 651 bp

Insert Sequence: >SC208410 3'UTR clone of NM_002654

The sequence shown below is from the reference sequence of NM_002654. The complete

sequence of this clone may contain minor differences, such as SNPs.

Blue=Stop Codon Red=Cloning site

Restriction Sites: Sgfl-Mlul

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a

point of reference. Note that the complete sequence of this clone is largely the same as the

reference sequence but may contain minor differences, e.g., single nucleotide

polymorphisms (SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The

package also includes 100 pmols of both the corresponding 5' and 3' vector primers in

separate vials.

PKM2 (PKM) (NM_002654) Human 3' UTR Clone - SC208410

RefSeq: <u>NM 002654.6</u>

Summary: This gene encodes a protein involved in glycolysis. The encoded protein is a pyruvate kinase

that catalyzes the transfer of a phosphoryl group from phosphoenolpyruvate to ADP, generating ATP and pyruvate. This protein has been shown to interact with thyroid hormone and may mediate cellular metabolic effects induced by thyroid hormones. This protein has been found to bind Opa protein, a bacterial outer membrane protein involved in gonococcal adherence to and invasion of human cells, suggesting a role of this protein in bacterial

pathogenesis. Several alternatively spliced transcript variants encoding a few distinct isoforms

have been reported. [provided by RefSeq, May 2011]

Locus ID: 5315 **MW:** 23.7
