

Product datasheet for SC208920

RNF21 (TRIM34) (NM_130389) Human 3' UTR Clone

Product data:

Product Type: 3' UTR Clones

Symbol: RNF21

Synonyms: IFP1; RNF21

Mammalian Cell Neomycin

Selection:

Vector: pMirTarget (PS100062)

ACCN: NM_130389

Insert Size: 719 bp

Insert Sequence: >SC208920 3'UTR clone of NM_130389

The sequence shown below is from the reference sequence of NM_130389. The complete sequence of

this clone may contain minor differences, such as SNPs.

RNF21 (TRIM34) (NM_130389) Human 3' UTR Clone | SC208920

Our molecular clone sequence data has been matched to the sequence identifier above as a

point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences, e.g., single nucleotide polymorphisms

(SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The

package also includes 100 pmols of both the corresponding 5' and 3' vector primers in

separate vials.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_130389.3</u>

Summary: The protein encoded by this gene is a member of the tripartite motif (TRIM) family. The TRIM

motif includes three zinc-binding domains, a RING, B-box type 1 and B-box type 2 domain, and a coiled-coil region. Expression of this gene is up-regulated by interferon. This gene is mapped to chromosome 11p15, where it resides within a TRIM gene cluster. Alternative splicing results in multiple transcript variants. A read-through transcript from the upstream TRIM6 gene has also been observed, which results in a fusion product from these neighboring family members.
