

Product datasheet for **SC215690**

HDAC5 (NM_001015053) Human 3' UTR Clone

Product data:

Product Type:	3' UTR Clones
Product Name:	HDAC5 (NM_001015053) Human 3' UTR Clone
Vector:	pMirTarget (PS100062)
Symbol:	HDAC5
Synonyms:	HD5; NY-CO-9
ACCN:	NM_001015053
Insert Size:	1653 bp

[View online »](#)

Insert Sequence: >SC215690 3'UTR clone of NM_001015053
 The sequence shown below is from the reference sequence of NM_001015053. The complete sequence of this clone may contain minor differences, such as SNPs.
 Blue=Stop Codon Red=Cloning site

Restriction Sites: SgfI-MluI

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences , e.g., single nucleotide polymorphisms (SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials.

RefSeq: [NM_001015053.2](#)

Summary: Histones play a critical role in transcriptional regulation, cell cycle progression, and developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription factor access to DNA. The protein encoded by this gene belongs to the class II histone deacetylase/acuc/apha family. It possesses histone deacetylase activity and represses transcription when tethered to a promoter. It coimmunoprecipitates only with HDAC3 family member and might form multicomplex proteins. It also interacts with myocyte enhancer factor-2 (MEF2) proteins, resulting in repression of MEF2-dependent genes. This gene is thought to be associated with colon cancer. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
