

Product datasheet for **SC215955**

BAIAP2 (NM_006340) Human 3' UTR Clone

Product data:

Product Type:	3' UTR Clones
Product Name:	BAIAP2 (NM_006340) Human 3' UTR Clone
Vector:	pMirTarget (PS100062)
Symbol:	BAIAP2
Synonyms:	BAP2; FLAF3; IRSP53; WAML
ACCN:	NM_006340
Insert Size:	1713 bp

[View online »](#)

Insert Sequence: >SC215955 3'UTR clone of NM_006340
 The sequence shown below is from the reference sequence of NM_006340. The complete sequence of this clone may contain minor differences, such as SNPs.
 Blue=Stop Codon Red=Cloning site

Restriction Sites: SgfI-MluI

OTI Disclaimer: Our molecular clone sequence data has been matched to the sequence identifier above as a point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences, e.g., single nucleotide polymorphisms (SNPs).

Components: The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials.

RefSeq: [NM_006340.3](#)

Summary:

The protein encoded by this gene has been identified as a brain-specific angiogenesis inhibitor (BAI1)-binding protein. This adaptor protein links membrane bound G-proteins to cytoplasmic effector proteins. This protein functions as an insulin receptor tyrosine kinase substrate and suggests a role for insulin in the central nervous system. It also associates with a downstream effector of Rho small G proteins, which is associated with the formation of stress fibers and cytokinesis. This protein is involved in lamellipodia and filopodia formation in motile cells and may affect neuronal growth-cone guidance. This protein has also been identified as interacting with the dentatorubral-pallidoluysian atrophy gene, which is associated with an autosomal dominant neurodegenerative disease. Alternative splicing results in multiple transcript variants encoding distinct isoforms.[provided by RefSeq, Jan 2009]
