

Product datasheet for **SC216030**

RBPMS (NM_001008710) Human 3' UTR Clone

Product data:

| | |
|---------------------------|-----------------------------------------|
| Product Type: | 3' UTR Clones |
| Product Name: | RBPMS (NM_001008710) Human 3' UTR Clone |
| Symbol: | RBPMS |
| Synonyms: | HERMES |
| Mammalian Cell Selection: | Neomycin |
| Vector: | pMirTarget (PS100062) |
| ACCN: | NM_001008710 |
| Insert Size: | 1761 bp |

| Restriction Sites: | Sgfl-MluI |
| OTI Disclaimer: | <p>Our molecular clone sequence data has been matched to the sequence identifier above as a point of reference. Note that the complete sequence of this clone is largely the same as the reference sequence but may contain minor differences , e.g., single nucleotide polymorphisms (SNPs).</p> |
| Components: | <p>The cDNA clone is shipped in a 2-D bar-coded Matrix tube as 10 ug dried plasmid DNA. The package also includes 100 pmols of both the corresponding 5' and 3' vector primers in separate vials.</p> |
| RefSeq: | <u>NM_001008710.3</u> |

|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Summary: | <p>This gene encodes a member of the RNA recognition motif family of RNA-binding proteins. The RNA recognition motif is between 80-100 amino acids in length and family members contain one to four copies of the motif. The RNA recognition motif consists of two short stretches of conserved sequence, as well as a few highly conserved hydrophobic residues. The encoded protein has a single, putative RNA recognition motif in its N-terminus. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jun 2013]</p> |
| Locus ID: | 11030 |
| MW: | 66.8 |
