

Product datasheet for SC301142

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Syntenin (SDCBP) (NM_001007070) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: Syntenin (SDCBP) (NM_001007070) Human Untagged Clone

Tag: Tag Free
Symbol: SDCBP

Synonyms: MDA-9; MDA9; ST1; SYCL; TACIP18

Vector: pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for NM_001007070, the custom clone sequence may differ by one or

more nucleotides

ACCN: NM 001007070

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Syntenin (SDCBP) (NM_001007070) Human Untagged Clone - SC301142

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001007070.1</u>, <u>NP 001007071.1</u>

 RefSeq Size:
 2167 bp

 RefSeq ORF:
 894 bp

 Locus ID:
 6386

 UniProt ID:
 000560

 Cytogenetics:
 8q12.1

Protein Families: Druggable Genome, Transmembrane

Gene Summary: The protein encoded by this gene was initially identified as a molecule linking syndecan-

mediated signaling to the cytoskeleton. The syntenin protein contains tandemly repeated PDZ domains that bind the cytoplasmic, C-terminal domains of a variety of transmembrane proteins. This protein may also affect cytoskeletal-membrane organization, cell adhesion, protein trafficking, and the activation of transcription factors. The protein is primarily

localized to membrane-associated adherens junctions and focal adhesions but is also found at the endoplasmic reticulum and nucleus. Alternative splicing results in multiple transcript variants encoding different isoforms. Related pseudogenes have been identified on multiple

chromosomes. [provided by RefSeq, Jan 2017]

Transcript Variant: This variant (5) differs in the 5' UTR and uses an alternate in-frame splice site in the coding region, compared to variant 1. These differences result in a shorter isoform

(isoform 3). Variants 4 and 5 encode the same isoform.
