

Product datasheet for SC301172

SPOP (NM 001007230) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: SPOP (NM 001007230) Human Untagged Clone

Tag: Tag Free **SPOP** Symbol:

Synonyms: BTBD32; NEDMACE; NEDMIDF; NSDVS1; NSDVS2; TEF2

Vector: pCMV6 series

>NCBI ORF sequence for NM_001007230, the custom clone sequence may differ by one or **Fully Sequenced ORF:**

Our molecular clone sequence data has been matched to the reference identifier above as a **OTI Disclaimer:**

> point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

OTI Annotation:

This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001007230.1</u>, <u>NP 001007231.1</u>

 RefSeq Size:
 3034 bp

 RefSeq ORF:
 1125 bp

 Locus ID:
 8405

 UniProt ID:
 043791

 Cytogenetics:
 17q21.33

Gene Summary: This gene encodes a protein that may modulate the transcriptional repression activities of

death-associated protein 6 (DAXX), which interacts with histone deacetylase, core histones, and other histone-associated proteins. In mouse, the encoded protein binds to the putative leucine zipper domain of macroH2A1.2, a variant H2A histone that is enriched on inactivated X chromosomes. The BTB/POZ domain of this protein has been shown in other proteins to mediate transcriptional repression and to interact with components of histone deacetylase co-repressor complexes. Alternative splicing of this gene results in multiple transcript variants

encoding the same protein. [provided by RefSeq, Jul 2008]

Transcript Variant: This variant (5) differs in the 5' UTR compared to variant 1. Transcript

variants 1-6 encode the same protein.
