

Product datasheet for **SC301406**

MRC1L1 (NM_001009567) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	MRC1L1 (NM_001009567) Human Untagged Clone
Tag:	Tag Free
Symbol:	MRC1L1
Synonyms:	bA541119.1; CLEC13DL
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>NCBI ORF sequence for NM_001009567, the custom clone sequence may differ by one or more nucleotides

ACCN:

NM_001009567

Insert Size:

5200 bp

OTI Disclaimer:

Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001009567.1</u> , <u>NP_001009567.1</u>
RefSeq Size:	5171 bp
RefSeq ORF:	4371 bp
Locus ID:	414308
Cytogenetics:	10p12.33
Protein Families:	Druggable Genome, Transmembrane
Gene Summary:	This gene encodes a type I membrane receptor protein highly related to the mannose receptor C type 1 protein (MRC1). The two genes are located near each other on chromosome 10 in a region thought to represent a segmental duplication. [provided by RefSeq]
