

## **Product datasheet for SC302240**

## ARF1 (NM 001024227) Human Untagged Clone

## **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** ARF1 (NM\_001024227) Human Untagged Clone

Tag: Tag Free

Symbol: ARF1

Synonyms: PVNH8

Mammalian Cell None

Selection:

Vector: pCMV6-XL5

E. coli Selection: Ampicillin (100 ug/mL)

Fully Sequenced ORF: >OriGene ORF sequence for NM\_001024227 edited

AAGTGA

Restriction Sites: Notl-Notl

**ACCN:** NM\_001024227

**Insert Size:** 1700 bp

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** The ORF of this clone has been fully sequenced and found to be a perfect match to

NM 001024227.1.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**OriGene Technologies, Inc.** 9620 Medical Center Drive, Ste 200

**Reconstitution Method:** 

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 001024227.1</u>, <u>NP 001019398.1</u>

 RefSeq Size:
 2020 bp

 RefSeq ORF:
 546 bp

 Locus ID:
 375

 UniProt ID:
 P84077

 Cytogenetics:
 1q42.13

**Protein Pathways:** Vibrio cholerae infection

**Gene Summary:** ADP-ribosylation factor 1 (ARF1) is a member of the human ARF gene family. The family

members encode small guanine nucleotide-binding proteins that stimulate the ADP-ribosyltransferase activity of cholera toxin and play a role in vesicular trafficking as activators of phospholipase D. The gene products, including 6 ARF proteins and 11 ARF-like proteins, constitute a family of the RAS superfamily. The ARF proteins are categorized as class I (ARF1, ARF2 and ARF3), class II (ARF4 and ARF5) and class III (ARF6), and members of each class share a common gene organization. The ARF1 protein is localized to the Golgi apparatus and has a central role in intra-Golgi transport. Multiple alternatively spliced transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Jul 2008]

Transcript Variant: This variant (1) represents the longest transcript.
