| OTI Disclaimer:       | '<br>Our molecular clone sequence data has been matched to the reference identifier above as a<br>point of reference. Note that the complete sequence of our molecular clones may differ from<br>the sequence published for this corresponding reference, e.g., by representing an alternative<br>RNA splicing form or single nucleotide polymorphism (SNP). |
| OTI Annotation:       | This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.                                                                                           |
| Components:           | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).                                                                                                                                                                         |

# **PORIGENE** HHLA3 (NM\_001031693) Human Untagged Clone – SC302539

| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol> |
