

Product datasheet for SC303296

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Urocortin (UCN) (NM_003353) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: Urocortin (UCN) (NM_003353) Human Untagged Clone

Tag: Tag Free
Symbol: Urocortin
Synonyms: UI; UROC

Mammalian Cell

Selection:

None

Vector: <u>pCMV6-Entry</u>

E. coli Selection: None

Restriction Sites: Please inquire ACCN: NM 003353

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeg: NM 003353.2, NP 003344.1

RefSeq Size: 615 bp

Urocortin (UCN) (NM_003353) Human Untagged Clone - SC303296

RefSeq ORF: 375 bp

Locus ID: 7349

UniProt ID: P55089

Cytogenetics: 2p23.3

Protein Families: Druggable Genome, Secreted Protein

Gene Summary: This gene encodes a member of the sauvagine/corticotropin-releasing factor/urotensin I

family. The encoded preproprotein is proteolytically processed to generate the mature peptide, an endogenous ligand for both corticotropin-releasing factor receptor 1 and

corticotropin-releasing factor receptor 2. In the brain this peptide may be responsible for the

effects of stress on appetite. This peptide may also play a role in mood disorders, neurodegeneration, and skeletal system disorders. In spite of the gene family name similarity, the product of this gene has no sequence similarity to urotensin-2. [provided by

RefSeq, Feb 2016]
