

## Product datasheet for SC304714

### Otoraplin (OTOR) (NM\_020157) Human Untagged Clone

#### Product data:

Product Type:	Expression Plasmids
Product Name:	Otoraplin (OTOR) (NM_020157) Human Untagged Clone
Tag:	Tag Free
Symbol:	OTOR
Synonyms:	FDP; MIAL1
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC304714 representing NM_020157. Blue=Insert sequence Red=Cloning site Green=Tag(s)

Plasmid Map:

**ACCN:** NM\_020157

**Insert Size:** 387 bp

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:**

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

**RefSeq:** [NM\\_020157.3](#)

**RefSeq Size:** 1482 bp

**RefSeq ORF:** 387 bp

**Locus ID:** 56914

**UniProt ID:** [Q9NRC9](#)

**Cytogenetics:** 20p12.1

**Protein Families:** Secreted Protein, Transmembrane

**MW:** 14.3 kDa

**Gene Summary:** This gene encodes a member of the melanoma-inhibiting activity gene family. The encoded protein is secreted via the Golgi apparatus and may function in cartilage development and maintenance. A frequent polymorphism in the translation start codon of this gene can abolish translation and may be associated with forms of deafness. [provided by RefSeq, Jul 2013]
