

## **Product datasheet for SC308426**

## MBNL1 (NM\_207295) Human Untagged Clone

## **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** MBNL1 (NM\_207295) Human Untagged Clone

Tag: Tag Free Symbol: MBNL1

Synonyms: EXP; MBNL
Mammalian Cell Neomycin

Selection:

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Fully Sequenced ORF: >SC308426 representing NM\_207295.

## MBNL1 (NM\_207295) Human Untagged Clone - SC308426

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 207295.1</u>

RefSeq Size: 5168 bp RefSeq ORF: 945 bp Locus ID: 4154

UniProt ID: Q9NR56

**Cytogenetics:** 3q25.1-q25.2

MW: 34.2 kDa

**Gene Summary:** This gene encodes a member of the muscleblind protein family which was initially described

in Drosophila melanogaster. The encoded protein is a C3H-type zinc finger protein that modulates alternative splicing of pre-mRNAs. Muscleblind proteins bind specifically to

expanded dsCUG RNA but not to normal size CUG repeats and may thereby play a role in the pathophysiology of myotonic dystrophy. Mice lacking this gene exhibited muscle

abnormalities and cataracts. Several alternatively spliced transcript variants have been described but the full-length natures of only some have been determined. The different isoforms are thought to have different binding specificities and/or splicing activities. [provided]

by RefSeq, Sep 2015]

Transcript Variant: This variant (5) lacks an alternate in-frame exon in the 5' coding region, compared to variant 1. The encoded isoform (e) is shorter than isoform a. Other names for this isoform are EXP36 and MBNL1subscript36. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record

were based on transcript alignments.
