

Product datasheet for **SC308809**

EFCAB6 (NM_022785) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	EFCAB6 (NM_022785) Human Untagged Clone
Tag:	Tag Free
Symbol:	EFCAB6
Synonyms:	dj185D5.1; DJBP; HSCBCIP1
Vector:	<u>pCMV6 series</u>
Fully Sequenced ORF:	>NCBI ORF sequence for NM_022785, the custom clone sequence may differ by one or more nucleotides

```

NM_022785

OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_022785.2</u> , <u>NP_073622.2</u>
RefSeq Size:	4817 bp
RefSeq ORF:	4506 bp
Locus ID:	64800
UniProt ID:	<u>Q5THR3</u>
Cytogenetics:	22q13.2-q13.31
Domains:	EFh
Protein Families:	Druggable Genome
Gene Summary:	This gene encodes a protein which directly binds the oncogene DJ-1 and androgen receptor to form a ternary complex in cells. This binding protein recruits histone-deacetylase complexes in order to repress transcription activity of androgen receptor. This protein may also play a role in spermatogenesis and fertilization. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2011] Transcript Variant: This variant (1) represents the longer transcript and encodes the longer isoform (a).
