

Product datasheet for SC308915

CROCC (NM_014675) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: CROCC (NM_014675) Human Untagged Clone
Tag: Tag Free
Symbol: CROCC
Synonyms: ROLT; TAX1BP2
Vector: pCMV6 series
Fully Sequenced ORF: >NCBI ORF sequence for NM_014675, the custom clone sequence may differ by one or more nucleotides

```

- Restriction Sites:** Please inquire
- ACCN:** NM_014675
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
- Reconstitution Method:**
1. Centrifuge at 5,000xg for 5min.
 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
 3. Close the tube and incubate for 10 minutes at room temperature.
 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
- RefSeq:** [NM_014675.2](#), [NP_055490.2](#)
- RefSeq Size:** 6642 bp
- RefSeq ORF:** 6054 bp
- Locus ID:** 9696
- UniProt ID:** [Q5TZA2](#)

Cytogenetics: 1p36.13

Domains: M, Pox_A_type_inc

Gene Summary: Major structural component of the ciliary rootlet, a cytoskeletal-like structure in ciliated cells which originates from the basal body at the proximal end of a cilium and extends proximally toward the cell nucleus (By similarity). Furthermore, is required for the correct positioning of the cilium basal body relative to the cell nucleus, to allow for ciliogenesis (PubMed:27623382). Contributes to centrosome cohesion before mitosis (PubMed:16203858).[UniProtKB/Swiss-Prot Function]
