

## **Product datasheet for SC309007**

## OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

## H2BC6 (NM\_003523) Human Untagged Clone

## **Product data:**

**Product Type:** Expression Plasmids

Product Name: H2BC6 (NM\_003523) Human Untagged Clone

Tag: Tag Free Symbol: H2BC6

**Synonyms:** dJ221C16.8; H2B.h; H2B/h; H2BC4; H2BC7; H2BC8; H2BC10; H2BFH; HIST1H2BE

Mammalian Cell

Selection:

Neomycin

Vector: pCMV6-Entry (PS100001)

E. coli Selection: Kanamycin (25 ug/mL)

Fully Sequenced ORF: >SC309007 representing NM\_003523.

**Restriction Sites:** Sgfl-Mlul ACCN: NM\_003523

Insert Size: 381 bp

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Cytogenetics:

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 003523.2</u>

 RefSeq Size:
 435 bp

 RefSeq ORF:
 381 bp

 Locus ID:
 8344

 UniProt ID:
 P62807

**Protein Pathways:** Systemic lupus erythematosus

6p22.2

**MW:** 13.9 kDa

**Gene Summary:** Histones are basic nuclear proteins that are responsible for the nucleosome structure of the

chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between nucleosomes and functions in the compaction of chromatin into higher order structures. The protein has antibacterial and antifungal antimicrobial activity. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H2B

family. Transcripts from this gene lack polyA tails but instead contain a palindromic

termination element. This gene is found in the large histone gene cluster on chromosome 6.
