

Product datasheet for **SC309066**

TReP132 (TRERF1) (NM_033502) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	TReP132 (TRERF1) (NM_033502) Human Untagged Clone
Tag:	Tag Free
Symbol:	TReP132
Synonyms:	BCAR2; dj139D8.5; HSA277276; RAPA; TReP-132; TREP132
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC309066 representing NM_033502. Blue=Insert sequence Red=Cloning site Green=Tag(s)

- Restriction Sites:** SgfI-MluI
- ACCN:** NM_033502
- Insert Size:** 3603 bp
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_033502.3](#)

RefSeq Size: 7584 bp

RefSeq ORF: 3603 bp

Locus ID: 55809

UniProt ID: [Q96PN7](#)

Cytogenetics: 6p21.1

Protein Families: Druggable Genome, Transcription Factors

MW: 132.3 kDa

Gene Summary: This gene encodes a zinc-finger transcriptional regulating protein which interacts with CBP/p300 to regulate the human gene CYP11A1. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul 2014]
Transcript Variant: This variant (2) uses an alternate in-frame splice donor site in the 5' coding region, compared to variant 1. Variant 2 encodes a shorter isoform (2), compared to isoform 1. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.
