

Product datasheet for **SC310787**

USP9X (NM_001039590) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	USP9X (NM_001039590) Human Untagged Clone
Tag:	Tag Free
Symbol:	USP9X
Synonyms:	DFFRX; FAF; FAM; MRX99; MRXS99F
Vector:	<u>pCMV6 series</u>

Fully Sequenced ORF: >NCBI ORF sequence for NM_001039590, the custom clone sequence may differ by one or more nucleotides

```

ACCN:

NM_001039590

OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001039590.1, NP_001034679.1</u>
RefSeq Size:	12401 bp
RefSeq ORF:	7713 bp
Locus ID:	8239
UniProt ID:	<u>Q93008</u>
Cytogenetics:	Xp11.4
Protein Families:	Druggable Genome
Gene Summary:	<p>This gene is a member of the peptidase C19 family and encodes a protein that is similar to ubiquitin-specific proteases. Though this gene is located on the X chromosome, it escapes X-inactivation. Mutations in this gene have been associated with Turner syndrome. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]</p> <p>Transcript Variant: This variant (3) represents the longer transcript and encodes the longer isoform (3).</p>
