PPAR alpha (PPARA) (AK096651) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: PPAR alpha (PPARA) (AK096651) Human Untagged Clone

Tag: Tag Free

Symbol: PPAR alpha

Vector: <u>pCMV6 series</u>

Fully Sequenced ORF: >NCBI ORF sequence for AK096651, the custom clone sequence may differ by one or more

nucleotides

Restriction Sites: Please inquire

ACCN: AK096651

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>AK096651.1</u>

RefSeq Size: 2731 bp

RefSeq ORF: 2731 bp

PPAR alpha (PPARA) (AK096651) Human Untagged Clone - SC311797

Locus ID: 5465

Cytogenetics: 22q13.31

Protein Families: Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

Protein Pathways: Adipocytokine signaling pathway, PPAR signaling pathway

Gene Summary: Peroxisome proliferators include hypolipidemic drugs, herbicides, leukotriene antagonists,

and plasticizers; this term arises because they induce an increase in the size and number of peroxisomes. Peroxisomes are subcellular organelles found in plants and animals that contain enzymes for respiration and for cholesterol and lipid metabolism. The action of peroxisome proliferators is thought to be mediated via specific receptors, called PPARs, which belong to the steroid hormone receptor superfamily. PPARs affect the expression of target genes involved in cell proliferation, cell differentiation and in immune and inflammation responses. Three closely related subtypes (alpha, beta/delta, and gamma) have been identified. This gene encodes the subtype PPAR-alpha, which is a nuclear transcription factor.

the full-length nature of only two has been determined. [provided by RefSeg, Jul 2008]

Multiple alternatively spliced transcript variants have been described for this gene, although
