

# Product datasheet for SC311940

## CRM1 (XPO1) (AK094339) Human Untagged Clone

### **Product data:**

#### **Product Type: Expression Plasmids Product Name:** CRM1 (XPO1) (AK094339) Human Untagged Clone Tag: Tag Free Symbol: CRM1 Synonyms: CRM1; emb; exp1 Vector: pCMV6 series >NCBI ORF sequence for AK094339, the custom clone sequence may differ by one or more **Fully Sequenced ORF:** nucleotides **Restriction Sites:** Please inquire ACCN: AK094339 **OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP). **OTI** Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA. **Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). **Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. **RefSeq:** AK094339.1 **RefSeq Size:** 2676 bp

	CRM1 (XPO1) (AK094339) Human Untagged Clone – SC311940
RefSeq ORF:	2676 bp
Locus ID:	7514
Cytogenetics:	2p15
Protein Families:	Druggable Genome
Gene Summary:	This cell-cycle-regulated gene encodes a protein that mediates leucine-rich nuclear export signal (NES)-dependent protein transport. The protein specifically inhibits the nuclear export of Rev and U snRNAs. It is involved in the control of several cellular processes by controlling the localization of cyclin B, MPAK, and MAPKAP kinase 2. This protein also regulates NFAT and AP-1. [provided by RefSeq, Jan 2015]
