

Product datasheet for SC312368

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

TBC1D20 (AK055488) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: TBC1D20 (AK055488) Human Untagged Clone

Tag: Tag Free Symbol: TBC1D20

Vector: pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for AK055488, the custom clone sequence may differ by one or more

nucleotides

Restriction Sites: Please inquire

ACCN: AK055488

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>AK055488.1</u>

RefSeq Size: 3218 bp

RefSeq ORF: 3218 bp

TBC1D20 (AK055488) Human Untagged Clone - SC312368

 Locus ID:
 128637

 Cytogenetics:
 20p13

Protein Families: Transmembrane

Gene Summary: This gene encodes a protein that belongs to a family of GTPase activator proteins of Rab-like

small GTPases. The encoded protein and its cognate GTPase, Rab1, bind the nonstructural protein 5A (NS5A) of the hepatitis C virus (HCV) to mediate viral replication. Depletion of this

protein inhibits replication of the virus and HCV infection. Mutations in this gene are

associated with Warburg micro syndrome 4. Alternative splicing results in multiple transcript

variants. [provided by RefSeq, Mar 2014]
