IHH (BC034757) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: IHH (BC034757) Human Untagged Clone

Tag: Tag Free Symbol: IHH

Synonyms: BDA1; HHG2; Indian hedgehog homolog; Indian hedgehog homolog (Drosophila)

Vector: pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for BC034757, the custom clone sequence may differ by one or more

nucleotides

Restriction Sites: Please inquire

ACCN: BC034757

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>BC034757.1</u>, <u>AAH34757.2</u>

RefSeq Size: 1760 bp

IHH (BC034757) Human Untagged Clone - SC312892

RefSeq ORF: 1760 bp Locus ID: 3549 Cytogenetics: 2q35

Protein Families: Druggable Genome, ES Cell Differentiation/IPS, Protease, Transmembrane

Protein Pathways: Hedgehog signaling pathway

Gene Summary: This gene encodes a member of the hedgehog family of proteins. The encoded preproprotein

is proteolytically processed to generate multiple protein products, including an N-terminal fragment that is involved in signaling. Hedgehog family proteins are essential secreted signaling molecules that regulate a variety of developmental processes including growth, patterning and morphogenesis. The protein encoded by this gene specifically plays a role in bone growth and differentiation. Mutations in this gene are the cause of brachydactyly type A1, which is characterized by shortening or malformation of the fingers and toes. Mutations in this gene are also the cause of acrocapitofemoral dysplasia. [provided by RefSeq, Nov

2015]
