ZNF568 (AK093123) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: ZNF568 (AK093123) Human Untagged Clone

Tag: Tag Free Symbol: ZNF568

Vector: pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for AK093123, the custom clone sequence may differ by one or more

nucleotides

Restriction Sites: Please inquire

ACCN: AK093123

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>AK093123.1</u>, <u>BAC04064.1</u>

RefSeq Size: 1914 bp RefSeq ORF: 1914 bp

ZNF568 (AK093123) Human Untagged Clone - SC313876

Locus ID: 374900 **Cytogenetics:** 19q13.12

Domains: KRAB, zf-C2H2

Protein Families: Transcription Factors

Gene Summary: Has transcriptional repression activity, partially through the recruitment of the corepressor

TRIM28 but has also repression activity independently of this interaction. Essential during embryonic development, where it acts as direct repressor of a placental-specific transcript of IGF2 in early development and regulates convergent extension movements required for axis

elongation and tissue morphogenesis in all germ layers. Also important for normal

morphogenesis of extraembryonic tissues including the yolk sac, extraembryonic mesoderm

and placenta. May enhance proliferation or maintenance of neural stem cells.

[UniProtKB/Swiss-Prot Function]
