## DDHD2 (AK056525) Human Untagged Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** DDHD2 (AK056525) Human Untagged Clone

Tag: Tag Free Symbol: DDHD2

Synonyms: iPLA(1)gamma; SAMWD1; SPG54

**Vector:** pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for AK056525, the custom clone sequence may differ by one or more

nucleotides

**Restriction Sites:** Please inquire

**ACCN:** AK056525

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>AK056525.1</u>, <u>BAG51738.1</u>

RefSeq Size: 3310 bp

### DDHD2 (AK056525) Human Untagged Clone - SC314490

 RefSeq ORF:
 2136 bp

 Locus ID:
 23259

 Cytogenetics:
 8p11.23

**Domains:** SAM, WWE, DDHD

Gene Summary: This gene encodes a phospholipase enzyme containing sterile-alpha-motif (SAM), WWE, and

DDHD domains. This protein participates in membrane trafficking between the endoplastic reticulum and the Golgi body. Mutations in this gene can cause autosomal recessive spastic paraplegia 54. Alternative splicing results in multiple transcript variants. [provided by RefSeq,

Dec 2013]
