## **HKDC1 (AK095086) Human Untagged Clone**

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: HKDC1 (AK095086) Human Untagged Clone

Tag: Tag Free Symbol: HKDC1

**Vector:** pCMV6 series

Fully Sequenced ORF: >NCBI ORF sequence for AK095086, the custom clone sequence may differ by one or more

nucleotides

**Restriction Sites:** Please inquire

**ACCN:** AK095086

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>AK095086.1</u>, <u>BAG52982.1</u>

**RefSeq Size:** 3689 bp **RefSeq ORF:** 2754 bp

## HKDC1 (AK095086) Human Untagged Clone - SC314913

Locus ID: 80201

Cytogenetics: 10q22.1

Domains: hexokinase

**Protein Families:** Druggable Genome

**Gene Summary:** This gene encodes a member of the hexokinase protein family. The encoded protein is

involved in glucose metabolism, and reduced expression may be associated with gestational diabetes mellitus. High expression of this gene may also be associated with poor prognosis in

hepatocarcinoma. [provided by RefSeq, Sep 2016]
