

Product datasheet for **SC314970**

BRDT (NM_001726) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	BRDT (NM_001726) Human Untagged Clone
Tag:	Tag Free
Symbol:	BRDT
Synonyms:	BRD6; CT9; SPGF21
Vector:	<u>pCMV6 series</u>

[View online »](#)

Fully Sequenced ORF: >NCBI ORF sequence for NM_001726, the custom clone sequence may differ by one or more nucleotides

```

Restriction Sites:	Please inquire
ACCN:	NM_001726
OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001726.2</u> , <u>NP_001717.2</u>
RefSeq Size:	3119 bp
RefSeq ORF:	2844 bp
Locus ID:	676
UniProt ID:	<u>Q58F21</u>
Cytogenetics:	1p22.1
Protein Families:	Protein Kinase, Transcription Factors
Gene Summary:	<p>BRDT is similar to the RING3 protein family. It possesses 2 bromodomain motifs and a PEST sequence (a cluster of proline, glutamic acid, serine, and threonine residues), characteristic of proteins that undergo rapid intracellular degradation. The bromodomain is found in proteins that regulate transcription. Several transcript variants encoding multiple isoforms have been found for this gene. [provided by RefSeq, Jun 2011]</p> <p>Transcript Variant: This variant (2) differs in the 5' UTR and uses an alternate in-frame splice junction at the 3' end of an exon compared to variant 4. The resulting isoform (b) lacks a short internal segment compared to isoform a. Variants 1, 2, and 3 all encode the same isoform (b).</p>
