

Product datasheet for SC315252

ATP8B4 (NM_024837) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	ATP8B4 (NM_024837) Human Untagged Clone
Tag:	Tag Free
Symbol:	ATP8B4
Synonyms:	ATPIM
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC315252 representing NM_024837. Blue=Insert sequence Red=Cloning site Green=Tag(s)

- Restriction Sites:** SgfI-MluI
- ACCN:** NM_024837
- Insert Size:** 3579 bp
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_024837.3](#)

RefSeq Size: 5697 bp

RefSeq ORF: 3579 bp

Locus ID: 79895

UniProt ID: [Q8TF62](#)

Cytogenetics: 15q21.2

Protein Families: Transmembrane

MW: 135.9 kDa

Gene Summary: This gene encodes a member of the cation transport ATPase (P-type) family and type IV subfamily. The encoded protein is involved in phospholipid transport in the cell membrane. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2013]
Transcript Variant: This variant (1) represents the protein-coding transcript and encodes a protein that is supported by homologs in mouse and orangutan.
