

Product datasheet for SC315312

NEK1 (AB067488) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: NEK1 (AB067488) Human Untagged Clone

Tag: Tag Free Symbol: NEK1

Synonyms: NY-REN-55; SRPS2; SRPS2A; SRTD6

Vector: pCMV6 series

>NCBI ORF sequence for AB067488, the custom clone sequence may differ by one or more **Fully Sequenced ORF:**

nucleotides

Restriction Sites: Please inquire

ACCN: AB067488

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

> point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

> into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: AB067488.1, BAB67794.2

RefSeq Size: 5497 bp

NEK1 (AB067488) Human Untagged Clone - SC315312

RefSeq ORF: 3777 bp Locus ID: 4750 Cytogenetics: 4q33

Domains: pkinase, TyrKc, S_TKc

Protein Families: Druggable Genome, Protein Kinase

Gene Summary: The protein encoded by this gene is a serine/threonine kinase involved in cell cycle

regulation. The encoded protein is found in a centrosomal complex with FEZ1, a neuronal protein that plays a role in axonal development. Defects in this gene are a cause of polycystic kidney disease (PKD). Several transcript variants encoding different isoforms have been

found for this gene. [provided by RefSeq, Dec 2010]
