

Product datasheet for SC317596

PRMT1 (NM_001536) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: PRMT1 (NM_001536) Human Untagged Clone

Tag: Tag Free
Symbol: PRMT1

Synonyms: ANM1; HCP1; HRMT1L2; IR1B4

Mammalian Cell None

Selection:

Vector: pCMV6-XL5

E. coli Selection: Ampicillin (100 ug/mL)

Fully Sequenced ORF: >OriGene ORF sequence for NM_001536 edited

PRMT1 (NM_001536) Human Untagged Clone - SC317596

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001536.3</u>, <u>NP 001527.3</u>

RefSeq Size: 1386 bp
RefSeq ORF: 1116 bp
Locus ID: 3276
UniProt ID: Q99873

Cytogenetics: 19q13.33

Gene Summary: This gene encodes a member of the protein arginine N-methyltransferase (PRMT) family.

Post-translational modification of target proteins by PRMTs plays an important regulatory

role in many biological processes, whereby PRMTs methylate arginine residues by

transferring methyl groups from S-adenosyl-L-methionine to terminal guanidino nitrogen atoms. The encoded protein is a type I PRMT and is responsible for the majority of cellular arginine methylation activity. Increased expression of this gene may play a role in many types of cancer. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene, and a pseudogene of this gene is located on the long arm of

chromosome 5. [provided by RefSeq, Dec 2011]

Transcript Variant: This variant (1) encodes the longest isoform (1).
