

## Product datasheet for **SC318608**

### KIF24 (NM\_194313) Human Untagged Clone

#### Product data:

Product Type:	Expression Plasmids
Product Name:	KIF24 (NM_194313) Human Untagged Clone
Tag:	Tag Free
Symbol:	KIF24
Synonyms:	bA571F15.4; C9orf48
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC318608 representing NM_194313. Blue=Insert sequence Red=Cloning site Green=Tag(s)

**Restriction Sites:**

Sgfl-Mlul

**Plasmid Map:**

**ACCN:** NM\_194313

**Insert Size:** 4107 bp

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

**OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:**

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

**RefSeq:** [NM\\_194313.2](#)

**RefSeq Size:** 6237 bp

**RefSeq ORF:** 4107 bp

**Locus ID:** 347240

**UniProt ID:** [Q5T7B8](#)

**Cytogenetics:** 9p13.3

**Protein Families:** Druggable Genome

**MW:** 151.9 kDa

**Gene Summary:** This gene encodes a member of the kinesin superfamily of microtubule-based motor proteins which are involved in the intracellular transport of membranous organelles, protein complexes, and mRNAs. They also play critical roles in mitosis, morphogenesis, and signal transduction. The encoded protein contains an N-terminal sterile alpha motif (SAM) domain and an ATP-binding kinesin motor domain. It binds centriolar coiled coil protein 110 and centrosomal protein 97 and localizes to the mother centriole to regulate ciliogenesis by controlling microtubule polymerization. [provided by RefSeq, Mar 2017]
