

Product datasheet for SC320612

CD151 (NM_139030) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: CD151 (NM_139030) Human Untagged Clone

Tag: Tag Free Symbol: CD151

Synonyms: GP27; MER2; PETA-3; RAPH; SFA1; TSPAN24

Mammalian Cell

Selection:

Neomycin

Vector:pCMV6-AC (PS100020)E. coli Selection:Ampicillin (100 ug/mL)

Fully Sequenced ORF: >OriGene sequence for NM_139030.3

CD151 (NM_139030) Human Untagged Clone - SC320612

Restriction Sites: Please inquire

ACCN: NM_139030

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 139030.3</u>, <u>NP 620599.1</u>

 RefSeq Size:
 1512 bp

 RefSeq ORF:
 762 bp

 Locus ID:
 977

 UniProt ID:
 P48509

Cytogenetics: 11p15.5

Domains: transmembrane4

Protein Families: Druggable Genome, Transmembrane

Gene Summary: The protein encoded by this gene is a member of the transmembrane 4 superfamily, also

known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprotein that is known to complex with integrins and other transmembrane 4 superfamily proteins. It is involved in cellular processes including cell adhesion and may regulate integrin trafficking and/or function. This protein enhances cell motility, invasion and metastasis of cancer cells. Multiple alternatively spliced transcript variants that encode the same protein have been described for this gene. [provided

by RefSeq, Jul 2008]

Transcript Variant: This variant (2) lacks an alternate segment in the 5' UTR, compared to

variant 1. All variants encode the same protein.
