

Product datasheet for **SC325238**

SLC6A6 (NM_001134367) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	SLC6A6 (NM_001134367) Human Untagged Clone
Tag:	Tag Free
Symbol:	SLC6A6
Synonyms:	TAUT
Vector:	<u>pCMV6 series</u>

[View online »](#)

- Fully Sequenced ORF:** >NCBI ORF sequence for NM_001134367, the custom clone sequence may differ by one or more nucleotides

- Restriction Sites:** Please inquire
- ACCN:** NM_001134367
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- OTI Annotation:** This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001134367.1 , NP_001127839.1
RefSeq Size:	6512 bp
RefSeq ORF:	1863 bp
Locus ID:	6533
UniProt ID:	P31641
Cytogenetics:	3p25.1
Protein Families:	Druggable Genome, Transmembrane
Gene Summary:	<p>This gene encodes a multi-pass membrane protein that is a member of a family of sodium and chloride-ion dependent transporters. The encoded protein transports taurine and beta-alanine. There is a pseudogene for this gene on chromosome 21. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2013]</p> <p>Transcript Variant: This variant (2) uses an alternate splice site in the 5' region and initiates translation at an alternate upstream start codon, compared to variant 1. The encoded isoform (c) has a longer N-terminus than isoform a. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.</p>
