

Product datasheet for **SC325807**

TEDC1 (NM_001134877) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	TEDC1 (NM_001134877) Human Untagged Clone
Tag:	Tag Free
Symbol:	TEDC1
Synonyms:	C14orf80
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC325807 representing NM_001134877. Blue=Insert sequence Red=Cloning site Green=Tag(s)

Plasmid Map:

ACCN: NM_001134877

Insert Size: 1059 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001134877.1](#)

RefSeq Size: 1547 bp

RefSeq ORF: 1059 bp

Locus ID: 283643

UniProt ID: [Q86SX3](#)

Cytogenetics: 14q32.33

MW: 39 kDa

Gene Summary: May play a role in counteracting perturbation of actin filaments, such as after treatment with the actin depolymerizing microbial metabolite Chivosazole F.[UniProtKB/Swiss-Prot Function]
Transcript Variant: This variant (4) differs in the 5' UTR and has multiple 5' coding region differences, compared to variant 1. These differences cause translation initiation to occur at a novel exon and results in an isoform (4) with a shorter and distinct N-terminus, compared to isoform 1.
