

Product datasheet for **SC326181**

FES (NM_001143785) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	FES (NM_001143785) Human Untagged Clone
Tag:	Tag Free
Symbol:	FES
Synonyms:	FPS
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)

[View online »](#)

Fully Sequenced ORF: >SC326181 representing NM_001143785.

Restriction Sites: SgfI-MluI

Plasmid Map:

ACCN: NM_001143785

Insert Size: 2085 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001143785.1](#)

RefSeq Size: 2422 bp

RefSeq ORF: 2085 bp

Locus ID: 2242

UniProt ID: [P07332](#)

Cytogenetics: 15q26.1

Protein Families:	Druggable Genome, Protein Kinase
Protein Pathways:	Axon guidance
MW:	78.6 kDa
Gene Summary:	<p>This gene encodes the human cellular counterpart of a feline sarcoma retrovirus protein with transforming capabilities. The gene product has tyrosine-specific protein kinase activity and that activity is required for maintenance of cellular transformation. Its chromosomal location has linked it to a specific translocation event identified in patients with acute promyelocytic leukemia but it is also involved in normal hematopoiesis as well as growth factor and cytokine receptor signaling. Alternative splicing results in multiple variants encoding different isoforms.[provided by RefSeq, Jan 2009]</p> <p>Transcript Variant: This variant (4) lacks multiple in-frame exons in the coding region, compared to variant 1, and encodes a shorter protein (isoform 4) with an incomplete SH2 domain, compared to isoform 1.</p>
