

Product datasheet for **SC326351**

FAM178A (SLF2) (NM_001136123) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	FAM178A (SLF2) (NM_001136123) Human Untagged Clone
Tag:	Tag Free
Symbol:	SLF2
Synonyms:	C10orf6; FAM178A
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>SC326351 representing NM_001136123. Blue=Insert sequence Red=Cloning site Green=Tag(s)

Restriction Sites:

Sgfl-MluI

Plasmid Map:

ACCN:	NM_001136123
Insert Size:	3561 bp
OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001136123.1
RefSeq Size:	4173 bp
RefSeq ORF:	3561 bp
Locus ID:	55719
UniProt ID:	Q8IX21
Cytogenetics:	10q24.31
MW:	133.4 kDa
Gene Summary:	Plays a role in the DNA damage response (DDR) pathway by regulating postreplication repair of UV-damaged DNA and genomic stability maintenance (PubMed:25931565). The SLF1-SLF2 complex acts to link RAD18 with the SMC5-SMC6 complex at replication-coupled interstrand cross-links (ICL) and DNA double-strand breaks (DSBs) sites on chromatin during DNA repair in response to stalled replication forks (PubMed:25931565). Promotes the recruitment of the SMC5-SMC6 complex to DNA lesions (PubMed:25931565).[UniProtKB/Swiss-Prot Function] Transcript Variant: This variant (2) lacks an exon and differs in the 3' UTR, compared to variant 1. The encoded isoform (2) is longer and has a distinct C-terminus, compared to isoform 1.
