

Product datasheet for SC327776

PYCR3 (NM_023078) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: PYCR3 (NM_023078) Human Untagged Clone

Tag: Tag Free
Symbol: PYCR3
Synonyms: PYCRL

Mammalian Cell Neomycin

Selection:

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Fully Sequenced ORF: >SC327776 representing NM_023078.

PYCR3 (NM_023078) Human Untagged Clone - SC327776

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeg: NM 023078.3

 RefSeq Size:
 2678 bp

 RefSeq ORF:
 861 bp

 Locus ID:
 65263

 UniProt ID:
 Q53H96

Cytogenetics: 8q24.3 Domains: P5CR

Protein Pathways: Arginine and proline metabolism, Metabolic pathways

MW: 29.9 kDa

Gene Summary: This gene encodes a protein that belongs to the pyrroline-5-carboxylate reductase family of

enzymes. Members of this family catalyze the final step in proline biosynthesis, converting pyrroline-5-carboxylate to proline. Glutamate and ornithine are precursors in the synthesis of

proline. The protein encoded by this gene is a cytoplasmic enzyme involved in the

biosynthesis of proline from ornithine. [provided by RefSeq, Aug 2016]

Transcript Variant: This variant (1) encodes the longer isoform (1). Sequence Note: This RefSeq

record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments. CCDS Note: The coding region has been updated to shorten the N-terminus to one that is more supported by conservation.
