

## **Product datasheet for SC329458**

## AF10 (MLLT10) (NM 001195630) Human Untagged Clone

## **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** AF10 (MLLT10) (NM\_001195630) Human Untagged Clone

Tag: Tag Free
Symbol: MLLT10
Synonyms: AF10

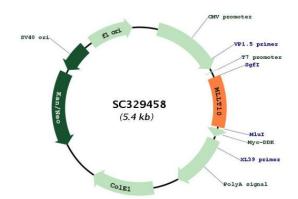

**Vector:** pCMV6-Entry (PS100001)

Fully Sequenced ORF: >SC329458 representing NM\_001195630.

Blue=Insert sequence Red=Cloning site Green=Tag(s)

**Restriction Sites:** Sgfl-Mlul

Plasmid Map:

## AF10 (MLLT10) (NM\_001195630) Human Untagged Clone - SC329458

**ACCN:** NM\_001195630

**Insert Size:** 540 bp

**OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 001195630.1</u>

 RefSeq Size:
 1148 bp

 RefSeq ORF:
 540 bp

 Locus ID:
 8028

 UniProt ID:
 P55197

 Cytogenetics:
 10p12.31

**Protein Families:** Druggable Genome, Transcription Factors

**MW:** 20 kDa

**Gene Summary:** This gene encodes a transcription factor and has been identified as a partner gene involved

in several chromosomal rearrangements resulting in various leukemias. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep

2010]

Transcript Variant: This variant (5) has multiple differences in the coding region, compared to

variant 1, one of which results in a translational frameshift and early stop codon. The

resulting protein (isoform e) has a distinct C-terminus and is shorter than isoform a. Variants

5, 6, and 7 all encode the same isoform (e).
