

Product datasheet for **SC329566**

RPL11 (NM_001199802) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: RPL11 (NM_001199802) Human Untagged Clone
Tag: Tag Free
Symbol: RPL11
Synonyms: DBA7; GIG34; L11; uL5
Vector: pCMV6-Entry (PS100001)
Fully Sequenced ORF: >SC329566 representing NM_001199802.
 Blue=Insert sequence Red=Cloning site Green=Tag(s)

Restriction Sites: SgfI-MluI

ACCN: NM_001199802

Insert Size: 534 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

[View online »](#)

Reconstitution Method:	<ol style="list-style-type: none"> 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001199802.1</u>
RefSeq Size:	641 bp
RefSeq ORF:	534 bp
Locus ID:	6135
UniProt ID:	<u>P62913</u>
Cytogenetics:	1p36.11
Protein Pathways:	Ribosome
MW:	20.1 kDa
Gene Summary:	<p>Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L5P family of ribosomal proteins. It is located in the cytoplasm. The protein probably associates with the 5S rRNA. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome. [provided by RefSeq, Dec 2010]</p> <p>Transcript Variant: This variant (2) lacks 3 nts at an alternate splice site, as compared to variant 1. The resulting isoform (2) lacks an internal aa in the N-terminal region, as compared to isoform 1.</p>
