#### Plasmid Map:

ACCN: Insert Size:	NM_001204178 711 bp
OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

### **CHODL (NM\_001204178) Human Untagged Clone – SC329722**

Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 001204178.1</u>
RefSeq Size:	2213 bp
RefSeq ORF:	711 bp
Locus ID:	140578
UniProt ID:	<u>Q9H9P2</u>
Cytogenetics:	21q21.1
Protein Families:	Transmembrane
MW:	27.2 kDa
Gene Summary:	This gene encodes a type I membrane protein with a carbohydrate recognition domain characteristic of C-type lectins in its extracellular portion. In other proteins, this domain is involved in endocytosis of glycoproteins and exogenous sugar-bearing pathogens. This protein localizes predominantly to the perinuclear region. Several transcript variants encoding a few different isoforms have been found for this gene. [provided by RefSeq, Feb 2011] Transcript Variant: This variant (6) differs in the 5' UTR and coding sequence and lacks an alternate coding exon compared to variant 1, that causes a frameshift. The resulting isoform (d) has a shorter N-terminus and a longer and distinct C-terminus compared to isoform a. Variants 5 and 6 both encode the same isoform (d). Sequence Note: This RefSeq record was

(d) has a shorter N-terminus and a longer and distinct C-terminus compared to isoform a. Variants 5 and 6 both encode the same isoform (d). Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.
