

Product datasheet for **SC329895**

BACE1 (NM_001207048) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: BACE1 (NM_001207048) Human Untagged Clone
Tag: Tag Free
Symbol: BACE1
Synonyms: ASP2; BACE; HSPC104
Vector: pCMV6-Entry (PS100001)
Fully Sequenced ORF: >SC329895 representing NM_001207048.
Blue=Insert sequence Red=Cloning site Green=Tag(s)

Plasmid Map:

ACCN: NM_001207048

Insert Size: 1206 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001207048.1](#)

RefSeq Size: 5226 bp

RefSeq ORF: 1206 bp

Locus ID:	23621
Cytogenetics:	11q23.3
Protein Families:	Druggable Genome, Protease, Transmembrane
Protein Pathways:	Alzheimer's disease
MW:	45 kDa
Gene Summary:	<p>This gene encodes a member of the peptidase A1 family of aspartic proteases. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein that is proteolytically processed to generate the mature protease. This transmembrane protease catalyzes the first step in the formation of amyloid beta peptide from amyloid precursor protein. Amyloid beta peptides are the main constituent of amyloid beta plaques, which accumulate in the brains of human Alzheimer's disease patients. [provided by RefSeq, Nov 2015]</p> <p>Transcript Variant: This variant (e) lacks two exons from the 5' end and has an alternate 5' exon, compared to variant a. The resulting isoform (E) has a shorter and distinct N-terminus, and lacks a predicted signal peptide compared to isoform A.</p>
